-

÷

cbseassistance.com

Exc. 5.1

1. $(2 \cdot 2)^2 = 2 \cdot 2 \times 2 \cdot 2 = 4 \cdot 4$ (C)

2. $\left(\frac{3}{7}\right)^2 = \frac{3}{7} \times \frac{3}{7} = \frac{9}{49}$ (D)

3. $(85)^2 = 85 \times 85 = 7225$ (B)

4. $(755)^2 - (745)^2$
 $= 755 + 745$ [$\because (n+1)^2 - n^2 = n+1+n = 2n+1$]
 $= 1500$ (B)

5. 25000 (B)

25000 is not a perfect square as there are odd number of zeroes.

- 6 a. The unit's digit of the square of 37 is 9 as $7^2 = 49$.
b. The unit's digit of the square of 123 is 9 as $3^2 = 9$.
c. The unit's digit of the square of 495 is 5 as $5^2 = 25$.
d. The unit's digit of the square of 334 is 6 as $4^2 = 16$.
e. The unit's digit of the square of 62 is 4 as $2^2 = 4$.
f. The unit's digit of the square of 190 is 0 as $0^2 = 0$.
g. The unit's digit of the square of 199 is 1 as $9^2 = 81$.
h. The unit's digit of the square of 231 is 1 as $1^2 = 1$.

7 a. Square of 136 is an even number as it is an even number.

b. Square of 231 is an odd number as it is an odd number.

c. Square of 179 is an odd number as it is an odd number.

d. Square of 100 is an even number as it is an even number.

e. Square of 1009 is an odd number as it is an odd number.

f. Square of 3254 is an even number as it is an even number.

g. Square of 563 is an odd number as it is an odd number.

8a. $81 = 1 + 3 + 5 + 7 + 9 + 11 + 13 + 15 + 17$

b. $169 = 1 + 3 + 5 + 7 + 9 + 11 + 13 + 15 + 17 + 19 + 21 + 23 + 25$

9a

$$\begin{array}{r|l} 2 & 450 \\ \hline 3 & 225 \\ \hline 3 & 75 \\ \hline 5 & 25 \\ \hline & 5 \end{array}$$

$$450 = 2 \times \underline{3 \times 3} \times \underline{5 \times 5}$$

Since 2 does not occur in a pair

\therefore 450 must be multiplied by 2 to get a perfect square.

\therefore Required least number = 2

b.

$$\begin{array}{r|l} 2 & 600 \\ \hline 2 & 300 \\ \hline 2 & 150 \\ \hline 3 & 75 \\ \hline 5 & 25 \\ \hline & 5 \end{array}$$

$$600 = \underline{2 \times 2 \times 2} \times 3 \times \underline{5 \times 5}$$

Since 2 and 3 do not occur in a pair.

\therefore We multiply 600 by $2 \times 3 = 6$ to get a perfect square.

\therefore Required least number = 6

c.

$$\begin{array}{r} 7 \overline{) 343} \\ 7 \quad \underline{49} \\ 7 \end{array}$$

$$343 = \underline{7 \times 7 \times 7}$$

Since 7 does not occur in a pair.

\therefore We multiply 343 by 7 to get a perfect square.

\therefore Required least number = 7

d.

$$\begin{array}{r} 2 \overline{) 3456} \\ 2 \quad \underline{1728} \\ 2 \quad \underline{864} \\ 2 \quad \underline{432} \\ 2 \quad \underline{216} \\ 2 \quad \underline{108} \\ 2 \quad \underline{54} \\ 3 \quad \underline{27} \\ 3 \quad \underline{9} \\ 3 \end{array}$$

$$3456 = \underline{2 \times 2 \times 2 \times 2 \times 2 \times 2 \times 2} \times \underline{3 \times 3 \times 3}$$

2 and 3 do not occur in a pair.

\therefore We multiply 3456 by $2 \times 3 = 6$ to get a perfect square.

\therefore Required least number = 6

$$\begin{array}{r}
 10a. \quad 2 \overline{) 512} \\
 \underline{2 \quad 256} \\
 2 \quad 128 \\
 \underline{2 \quad 64} \\
 2 \quad 32 \\
 \underline{2 \quad 16} \\
 2 \quad 8 \\
 \underline{2 \quad 4} \\
 2
 \end{array}$$

$$512 = \underline{2 \times 2 \times 2 \times 2 \times 2 \times 2 \times 2 \times 2 \times 2}$$

Since 2 does not occur in a pair.

\therefore We divide 512 by 2 to get a perfect square.

\therefore Required least number = 2

$$\begin{array}{r}
 b. \quad 2 \overline{) 1000} \\
 \underline{2 \quad 500} \\
 2 \quad 250 \\
 \underline{5 \quad 125} \\
 5 \quad 25 \\
 \underline{5} \\
 5
 \end{array}$$

$$1000 = \underline{2 \times 2 \times 2 \times 5 \times 5 \times 5}$$

Since 2 and 5 do not occur in a pair.

\therefore We divide 1000 by $2 \times 5 = 10$ to get a perfect square.

\therefore Required least number = 10

$$\begin{array}{r}
 c. \quad 2 \overline{) 6272} \\
 \underline{2 \quad 3136} \\
 1568
 \end{array}$$

$$\begin{array}{r}
 2 \overline{)1568} \\
 2 \overline{)784} \\
 2 \overline{)392} \\
 2 \overline{)196} \\
 2 \overline{)98} \\
 7 \overline{)49} \\
 7
 \end{array}$$

$$6272 = \underline{2 \times 2 \times 2 \times 2 \times 2 \times 2 \times 2 \times 7 \times 7}$$

Since 2 does not occur in a pair.

\therefore We divide 6272 by 2 to get a perfect square.

\therefore Required least number = 2

d.

$$\begin{array}{r}
 2 \overline{)10224} \\
 2 \overline{)5112} \\
 2 \overline{)2556} \\
 2 \overline{)1278} \\
 3 \overline{)639} \\
 3 \overline{)213} \\
 71
 \end{array}$$

Since 71 does not occur in a pair.

\therefore We divide 10224 by 71 to get a perfect square.

\therefore Required least number = 71

11a. $15 = 2 \times 7 + 1$

$$\therefore 15 = 8^2 - 7^2$$

b. $117 = 2 \times 58 + 1$

$$\therefore 117 = 59^2 - 58^2$$

c. $231 = 2 \times 115 + 1$

$$\therefore 231 = 116^2 - 115^2$$

$$12. \quad \begin{aligned} 11^2 &= 121 \\ 101^2 &= 10201 \\ 10101^2 &= 102030201 \\ 1010101^2 &= 1020304030201 \end{aligned}$$

$$13a. \quad 1 + 3 + 5 + 7 + 9 = 5^2 = 25$$

$$b. \quad 1 + 3 + 5 + 7 + 9 + 11 + 13 = 7^2 = 49$$

$$c. \quad 1 + 3 + 5 + 7 + 9 + 11 + 13 + 15 + 17 + 19 = 10^2 = 100$$

$$14a. \quad 7^2 = 1 + 3 + 5 + 7 + 9 + 11 + 13$$

$$b. \quad 9^2 = 1 + 3 + 5 + 7 + 9 + 11 + 13 + 15 + 17$$

$$c. \quad 13^2 = 1 + 3 + 5 + 7 + 9 + 11 + 13 + 15 + 17 + 19 + 21 + 23 + 25$$

$$15a. \quad \left(-\frac{4}{9}\right)^2 = \left(-\frac{4}{9}\right) \times \left(-\frac{4}{9}\right) = \frac{16}{81}$$

$$b. \quad \left(\frac{3}{11}\right)^2 = \frac{3}{11} \times \frac{3}{11} = \frac{9}{121}$$

$$c. \quad \left(\frac{9}{17}\right)^2 = \frac{9}{17} \times \frac{9}{17} = \frac{81}{289}$$

$$d. \quad \left(\frac{13}{19}\right)^2 = \frac{13}{19} \times \frac{13}{19} = \frac{169}{361}$$

$$e. \quad \left(-\frac{5}{13}\right)^2 = \left(-\frac{5}{13}\right) \times \left(-\frac{5}{13}\right) = \frac{25}{169}$$

$$f. \quad \left(\frac{19}{23}\right)^2 = \frac{19}{23} \times \frac{19}{23} = \frac{361}{529}$$

$$16. \quad 1^2 + 2^2 + 2^2 = 3^2$$

$$2^2 + 3^2 + 6^2 = 7^2$$

$$3^2 + 4^2 + \underline{12^2} = 13^2 \quad (a)$$

$$4^2 + \underline{5^2} + 20^2 = 21^2 \quad (b)$$

$$(c) \quad 6^2 + \underline{7^2} + 42^2 = \underline{43^2} \quad (d)$$

$$(e) \quad \underline{8^2} + 9^2 + 72^2 = 73^2$$
